# A Table to know when the Terms

begin and end, and the number of their Returns, with the days of the Month whereon they will be this present Year, 1685.

Hilary Term begins the 23.	{	Oftab. Hilary.	Jan. 20.
of January, and ends the 12.		Quind. Hilary.	Jan. 27.
of February, and hath 4. Re-		Craft. Paris.	Feb. 3.
turns, Viz.		Oftab. Paris.	Feb. 10.

Easter Term begins the 6. of	{	Quind. Pasche	May 4.
May, and ends the 1. of		Tres Pasche	May 11.
June, and hath 5. Returns,		Mens. Pasche	May 18.
Viz.		Quind. Pasche	May 25.
		Craft. Ascens.	May 29.

Trinity Term begins the 19.	{	Craft. Trinit.	June 15.
of June, and ends the 18. of		Oftab. Trinit.	June 22.
July, and hath 4. Returns,		Quind. Trinit.	June 29.
Viz.		Tres Trinit.	July 6.

Michaelmas Term begins	{	Tres Mich.	Octob. 20.
the 23. of October, and ends		Mens. Mich.	Octob. 27.
the 28. of November, and		Craft. Animar.	Nov. 3.
hath 6. Returns, Viz.		Craft. Mart.	Nov. 12.
		Oftab. Mart.	Nov. 19.
		Quind. Mart.	Nov. 26.

## The Characters of the Seven Planets.

♄ Saturn, ♃ Jupiter, ♂ Mars, ☉ Sol, ♀ Venus, ☿ Mercury, ☾ Luna, ☊ Dragons head, ☋ Dragons tail.

## The Characters of the Five Aspects.

♌ Conjunction, in the same Sign and degree.

\* Sextile, when Planets are distant 60 deg. or 2 Signs.

☐ Quartile, when distant 90 deg. or 3. Signs.

Δ Trine, when they are distant 120 deg. or 4 Signs.

♌ Opposition, when distant 180 deg. or 6 Signs.

Of the Eclipses this year 1685.

There will be three Eclipses this present year; one of the Sun, and two of the Moon; whereof the last of the Moon will only be visible in our *British* Hemisphere.

The first will be of the Moon, on *June* the sixth about six of the clock at Night, in six and twenty degrees of the celestial Archer or *Sagittary*: it will be invisible to us in *England*, by reason of the Moons being below the Eastern Horizon, at the time thereof.

The second will be a defect of the Sun, on *June* the 21. at eight of the clock at night, in ten degrees of *Cancer*; but will be scarcely visible to us, because the Sun is then just setting: besides it will be but a small Eclipse.

The third will be an Eclipse of the Moon, on *November* the thirtieth day, the middle time thereof at 26 minutes past 10 of the clock at Night. This Eclipse is celebrated in 19. degrees of *Geniu*, and will be visible, total, and Central.

The Planet *Venus* is our bright Morning Star, from the beginning of this year, unto the 18. of *June*, at which time she makes her conjunction with the Sun, and so becomes Occidental, and our Evening-Star, the remaining part of the year.

#### ADVERTISEMENT.

Whereas his Majesty hath been graciously pleased to grant unto Robert Wadman, Esq; and his Heirs, a Fair of Cattle and all other Goods and Merchandizes whatsoever, to be kept on Countess-fields near Stonehenge, and between Stonehenge and Great-Amesbury in the County of Wilts, 6. Miles from Salisbury upon the 25. and 26. of September yearly, called by the name of Countess-Fair: These are to give notice, That the said Fair will be held on the said days, and care is taken that all Buyers and Sellers may be accommodated with all conveniences.

## White 1685.

**T**O Measure Timber and Board, the ordinary Way now used amongst Carpenters in the Country, is by the Line of Numbers, commonly called *Gunters Line*.

### Board-Measure.

As 12 is to the breadth in Inches : so the length in Feet to the content in Feet.

Squared Timber 14 Inches on both sides, or any other equal Square:

As 12 Inches is to 14 Inches the breadth or side : so the length in Feet, to a fourth Number ; and that fourth Number extended to the content in Feet.

A Square 14 Inches one side, and 9 Inches the other sides or any unequal Squared Timber.

As 12 Inches is to 9 Inches the breadth : so the depth 14 Inches to a fourth Number.

As 12 to this fourth Number, so the length in Feet to the content in Feet.

### Round Timber.

As 42. 54, ( the Circumference in Inches that makes 1 Foot long, a Foot. ) Is to the Circumference in Inches. So the length in Feet, to a fourth Number. And that fourth, to the content in Feet being extended.

But the usual way with Carpenters is to girt it about the middle, and take a fourth part thereof for the Square, and then measure it as Squared Timber by the Line. Note, that if the Compasses come off the Line, they must be set at the same point on the Line at the other end of the Ruler : and always keep them forward the same way, according to the Proposition.

*Kinde Reader:*

**I** Here direct thee a plain and easie way to make the Cieling-Dial, by help of an Horizontal-Dial, at two Operations: But I could describe two several ways to make the Cieling-Dial; one by the Sines and Tangents on the Sector, the other way by placing the Natural Tangent of each Hour on the Equinoctial-line found on the Cieling: And by the Complement of each Hours Arch from the Meridian, the Hour-lines are drawn, pointing to the Center without the Room. But considering these ways might seem to a new Practitioner an Herculean task, therefore this easie way I have contrived.

First, Provide a piece of Looking-glass made round, about the bigness of a Groat, and scrape or rub off the Silver, and then it will cast but one shadow on the Cieling; then cut a round plate in the Gerdin of your Window, or in some piece of Wood fastned close to the Glass-window, about sixteen or eighteen Inches from the Cieling, in which lay your Glass, with some soft Wax at the bottom thereof, that you may crush the Glass which way you please; and be sure to place it level with the Horizon, which is the principal work to be done carefully. The Glass thus fixed, provide a true Horizontal-Dial, made for the Latitude wherein you live, and place it exactly by some other Dial in your Window, and mark the place in case it be removed; or if it be fixed on a Post near thereto, it will serve. Then as each Hour goeth in your Horizontal-Dial, mark the Hours with a small black spot upon the Cieling, in the midst of the place where the Glass casteth the reflection of the Sun upon the Cieling; do so as long as the Sun doth shine upon the Cieling. If you cannot mark all the Hours in one Day, mark the rest of the Hours as soon as you can. Then about a Month after this Observation, or when you see the Sun removed on the Cieling, about a foot or more, make another Observation of Hours on the Cieling, as you did before. Then with a Packthread and a Coal rubbed thereon, may two move their hands upon the Cieling to and fro, until the Line lieth directly over two of those spots, marked for each Hour; then may you strike the Line on the Cieling, which will represent and be the true Hour-line, according to your Horizontal Dial, though the Window Decline from the South. But for further Instruction, behold the Figure.

A. the Glass. B. the upper Sill or Transum of the Window and Perpendicular to A. The little spots in the Hour-lines, signifie the first and second Observations, observed from the Horizontal-Dial, by which the Hour-lines are drawn, pointing to the Center in the Air without the Room. The Hours of Seven in the Morning, and Five at Night, will seldom fall upon the Cieling, except

except the Window Decline from the South; which if it do, your work must be after the same manner as I have before declared.

*Note, that the round piece of Looking-glass must be laid level, close to a clear square pane of glass within the Room.*

# ADVERTISEMENT S.

Whereas since the decease of Dr. Lockyer, many have been at a loss to know where his true Universal Pill is to be had, which is so famous in all his Majesties Dominions and Plantations, by the Cures it hath wrought in the Scurvey, Dropsie, Stone, Consumption, Aches and Lameness of the Limbs, all sorts of Agues and Feavers, Gripings of the Guts, &c. This is to certify, that it is only prepared by Mr. Wat as his Nephew, in St. Thomas's Southward; and Mr. Eyre Apothecary without Bishop's-gate London, whom he appointed his only Trustees for the same after his Death.

Those highly approved, and only true Spirits of Scurvy-Grass, both plain and Golden, famous for their Admirable Cures in the Scurvy, Dropsie, and several other General Distempers are exactly and faithfully Prepared, and Sold by the first Author Robert Eastman, at his House in Pauls Church, near Doctors Commons, London, with printed Directions for their use. The Bottles are Sealed with his Coat of Arms, the Half-Moon and Beams, to prevent Counterfeits: Price one Shilling each Bottle. These are the True Spirits, notwithstanding all the late Pretenders thereunto; therefore let all persons beware they are not cheated with upstart

THIS Table shews the Interest of any sum of Money from 1*l.* to 100*l.* from a day to a year. And by the help of Addition you may compute the Interest of any sum whatsoever. And note, that for the greater exactness the penny is divided into 100 parts; so that 25 parts are a farthing, and 50 parts an half-penny, and 75 parts 3 farthings, &c.

Example:

The Interest of 100 *l.* for six months one week and one day, is thus found by the Table.

$$\begin{array}{l} \text{Interest of 100 } l. \left\{ \begin{array}{l} \text{for 6 mon. } 03-0-0-00 \\ \text{for 1 week, } 00-2-7-61 \\ \text{for a day, } 00-0-3-24 \end{array} \right\} \begin{array}{l} l. \quad s. \quad d. \\ \text{viz. } 3-2-7 \text{ half-pen.} \\ 03-2-7-55 \end{array} \end{array}$$

White. 1685.

## The Explanation and Use OF THE MAP and TABLE.

**F**irst for the Map: The Figures in each Shire of the Map, are to shew you the names of every County, and the Letters in the same are for such uses as I will shew hereunder.

You must understand, that London is in Middlesex, which County of Middlesex hath the figures of 22 in it, and the little black speck or spot therein, signifieth London. Now if you would readily finde the name of any Shire therein, and how many miles the middle of the said County (in a straight line) is from London, and what point of the Compass it lieth from the said City, resort then to the Table of Shires on the other side, and it will resolve you.

As for Example :

Yorkshire it hath the figures of 39 in the Map, and so it hath likewise in the Table; where is shewed that the middle or heart of that Shire is 145 Miles from London in a straight line, and it lieth North from the City; and looking forward toward the right hand, it sheweth it hath one City, Forty Market Towns, Fourteen Castles, Four hundred fifty nine Parishes, Thirty six Rivers, and Seventy two Parks; and so of the rest.

The use of the Letters in the Map, is this :

Scotl. signifieth part of Scotland, I part of Ireland, F part of France, M the Isle of Man, W the Isle of Wight, L the Lizard-point, H Holy-head, the \* the Irish-Sea, B the British or English-Sea, G the German-Sea, Ba Barwick, D Dover, N Newcastle, C the Points of Compass, S the Scale of Miles by which you may measure the distance of any place: for every black degree is five miles, so is every white.

The 39 Shires from Berkshire to Yorkshire are the English Shires, and the other 13 from Anglesey to Radnorshire are Welsh.

It may be something farther in Miles to the middle of each Shire, by reason of the crookedness of the high-ways, Hills, and Vallies; but what is here set down is true in a straight line from London.

England

White. 1685.

**E**ngland containeth 29568000 Acres.

Scotland containeth 14432000 Acres.

Ireland containeth 18000000 of Acres.

The 17 Provinces of the *Low Countries* contain in the whole, 10791000 Acres; whereof those under Spain, 7197000 Acres.

*These United* under the States, 3599000 Acres.

*France* in its 32 Provinces containeth 82879000 Acres.

### The Explanation of the following Table.

**F**irst, get a Chain or Cord of two perches in length, and divide each perch into 10 equal parts, which I call links, each of those parts will contain 19 inches and 8 parts of one inch: the inch divided into 10 parts, 10 of those links makes 16 feet and an half, our common perch statute-measure: 100 square-links makes one perch of land, 40 square perches make one rod, 80 half an acre, 120 three rods, and 160 square perches one acre.

This following Table doth contain 5 Columns: The first Column on the left hand sheweth the length of the Acre in perches and half perches; the figure of 5 under every length, signifieth 5 links, or half a perch forward: The other four Columns shew the breadth for one Acre; the first Perches, the second Links, the third Inches, the fourth Parts of one inch, the inch divided into 10 parts.

And also in this last Column in many places of this Table, you will see a small Figure placed on the right hand of p, which is no more than one 10th part of an inch divided into 4 parts; and the true or neereſt part I have observed.

*Example:* At 13 perches in length, the breadth will be found 12 perches, 3 links, 1 inch, and 5 parts of an inch, and 1 part of a fourth; which is a quarter of a tenth part. At 13 perches and an half in length, which is expressed by the figure of 5 under 13, you will finde the breadth 11 perches, 8 links, 10 inches, 2 parts and 3 quarters.
